

❖ Ion-Size Parameter and the Theoretical Mean - Activity Coefficient in the Case of Ionic Clouds with Finite-Sized Ions

As we know that the total electrostatic potential at a distance r can simply be fragmented as given below.

$$\psi_r = \psi_{ion} + \psi_{cloud} \quad (156)$$

or

$$\psi_{cloud} = \psi_r - \psi_{ion} \quad (157)$$

The electrostatic potential at a distance r from an ion of finite size is

$$\psi_r = \frac{Z_i e_0}{\epsilon} \frac{e^{\kappa a}}{(1 + \kappa a)} \frac{e^{-\kappa r}}{r} \quad (158)$$

Also, from the formulation of potential due to a single charge at a distance r , we know that

$$\psi_{ion} = \frac{Z_i e_0}{\epsilon r} \quad (159)$$

After putting the values of ψ_r and ψ_{ion} from equation (158) and equation (159) into equation (157), we have

$$\psi_{cloud} = \frac{Z_i e_0}{\epsilon} \frac{e^{\kappa a}}{(1 + \kappa a)} \frac{e^{-\kappa r}}{r} - \frac{Z_i e_0}{\epsilon r} \quad (160)$$

or

$$\psi_{cloud} = \frac{Z_i e_0}{\epsilon r} \left[\frac{e^{\kappa(a-r)}}{(1 + \kappa a)} - 1 \right] \quad (161)$$

At this point, we must recall the relationship of mean activity coefficient and chemical potential change of the ion-ion interaction, i.e.,

$$RT \ln f_i = \Delta\mu_{i-l} \quad (162)$$

also

$$\Delta\mu_{i-l} = \frac{N_A Z_i e_0}{2} \psi \quad (163)$$

From equation (162) and (163), we have

$$RT \ln f_i = \frac{N_A Z_i e_0}{2} \psi \quad (164)$$

$$\ln f_i = \frac{N_A Z_i e_0}{2RT} \psi \quad (165)$$

Moreover, as the potential at the surface ($r = a$) of the ion must be

$$\psi = \psi_{cloud} \quad (166)$$

Which implies that ψ_{cloud} in equation (161) at $r = a$ should become

$$\psi_{cloud} = \frac{Z_i e_0}{\epsilon a} \left[\frac{1}{(1 + \kappa a)} - 1 \right] \quad (167)$$

or

$$\psi_{cloud} = \frac{Z_i e_0}{\epsilon a} \left[\frac{1 - 1 - \kappa a}{(1 + \kappa a)} \right] \quad (168)$$

$$\psi_{cloud} = -\frac{Z_i e_0}{\epsilon \kappa^-} \frac{1}{(1 + \kappa a)} \quad (169)$$

After using the value of equation (169) in equation (165), we get

$$\ln f_i = -\frac{N_A Z_i^2 e_0^2}{2RT\epsilon\kappa^{-1}} \frac{1}{(1 + \kappa a)} \quad (170)$$

The mean ionic activity coefficient, in this case, will be

$$\log f_{\pm} = -\frac{AZ_+Z_-}{(1 + \kappa a)} I^{1/2} \quad (171)$$

Where I is the ionic strength and A is Debye-Huckel constant. Now since the thickness of the ionic cloud is defined as

$$\kappa = BI^{1/2} \quad (172)$$

After putting the value of κ from equation (172) into equation (171), we have

$$\log f_{\pm} = -\frac{AZ_+Z_- I^{1/2}}{1 + aBI^{1/2}} \quad (173)$$

Which is the equation for the mean ionic activity coefficient when the central ion has a finite size. Now recall the equation for mean ionic activity coefficient when the central ion was considered as point charge i.e.

$$\log f_{\pm} = -AZ_+Z_- I^{1/2} \quad (174)$$

Hence, the two equations differ only in respect of denominator $1 + \kappa a$. The rearranged form of the equation (171) is

$$\log f_{\pm} = -\frac{AZ_+Z_-}{(1 + a/\kappa^{-1})} I^{1/2} \quad (175)$$

At large dilution, $a \ll \kappa^{-1}$, and the denominator tends to approach unity. Therefore, at very large dilution, the equation (175) becomes equal to equation (174), proving the correspondence principle.

The most obvious approach to estimate the ion size parameter is the sum of the crystallographic radii of the cation and anions present in the electrolytic-solution. This is because the two ions cannot come closer than the sum of their individual ionic radii. However, since ions are hydrated in aqueous solutions, one might think the ion size parameter as the sum of the hydrated radii instead. Nevertheless, the hydrated radii would face some compression during the course of the collision of ion. All this suggests that the magnitude of ‘ a ’ must be greater than the sum of the individual crystallographic radii and should be less than the sum of their individual hydrated radii. Therefore, the “mean distance of closest approach” should be more appropriate for this situation. The best way to estimate the ion-size parameter is to calibrated equation (175) to match the experimental value of mean ionic activity coefficient. After knowing the ion size parameter at one concentration, the value of mean ionic activity coefficient can easily be determined at other concentrations.

A TEXTBOOK OF PHYSICAL CHEMISTRY

Volume I

MANDEEP DALAL

First Edition

DALAL INSTITUTE

Table of Contents

| | |
|---|-----------|
| CHAPTER 1 | 11 |
| Quantum Mechanics – I | 11 |
| ❖ Postulates of Quantum Mechanics | 11 |
| ❖ Derivation of Schrodinger Wave Equation..... | 16 |
| ❖ Max-Born Interpretation of Wave Functions | 21 |
| ❖ The Heisenberg's Uncertainty Principle..... | 24 |
| ❖ Quantum Mechanical Operators and Their Commutation Relations..... | 29 |
| ❖ Hermitian Operators – Elementary Ideas, Quantum Mechanical Operator for Linear Momentum, Angular Momentum and Energy as Hermitian Operator | 52 |
| ❖ The Average Value of the Square of Hermitian Operators | 62 |
| ❖ Commuting Operators and Uncertainty Principle (x & p ; E & t)..... | 63 |
| ❖ Schrodinger Wave Equation for a Particle in One Dimensional Box..... | 65 |
| ❖ Evaluation of Average Position, Average Momentum and Determination of Uncertainty in Position and Momentum and Hence Heisenberg's Uncertainty Principle..... | 70 |
| ❖ Pictorial Representation of the Wave Equation of a Particle in One Dimensional Box and Its Influence on the Kinetic Energy of the Particle in Each Successive Quantum Level | 75 |
| ❖ Lowest Energy of the Particle | 80 |
| ❖ Problems | 82 |
| ❖ Bibliography | 83 |
| CHAPTER 2 | 84 |
| Thermodynamics – I | 84 |
| ❖ Brief Resume of First and Second Law of Thermodynamics..... | 84 |
| ❖ Entropy Changes in Reversible and Irreversible Processes..... | 87 |
| ❖ Variation of Entropy with Temperature, Pressure and Volume | 92 |
| ❖ Entropy Concept as a Measure of Unavailable Energy and Criteria for the Spontaneity of Reaction | 94 |
| ❖ Free Energy, Enthalpy Functions and Their Significance, Criteria for Spontaneity of a Process ... | 98 |
| ❖ Partial Molar Quantities (Free Energy, Volume, Heat Concept)..... | 104 |
| ❖ Gibb's-Duhem Equation..... | 108 |
| ❖ Problems | 111 |
| ❖ Bibliography | 112 |

| | |
|--|------------|
| CHAPTER 3 | 113 |
| Chemical Dynamics – I | 113 |
| ❖ Effect of Temperature on Reaction Rates..... | 113 |
| ❖ Rate Law for Opposing Reactions of 1st Order and 2nd Order..... | 119 |
| ❖ Rate Law for Consecutive & Parallel Reactions of 1st Order Reactions | 127 |
| ❖ Collision Theory of Reaction Rates and Its Limitations | 135 |
| ❖ Steric Factor..... | 141 |
| ❖ Activated Complex Theory | 143 |
| ❖ Ionic Reactions: Single and Double Sphere Models | 147 |
| ❖ Influence of Solvent and Ionic Strength..... | 152 |
| ❖ The Comparison of Collision and Activated Complex Theory | 157 |
| ❖ Problems..... | 158 |
| ❖ Bibliography | 159 |
| CHAPTER 4 | 160 |
| Electrochemistry – I: Ion-Ion Interactions | 160 |
| ❖ The Debye-Huckel Theory of Ion-Ion Interactions | 160 |
| ❖ Potential and Excess Charge Density as a Function of Distance from the Central Ion..... | 168 |
| ❖ Debye-Huckel Reciprocal Length | 173 |
| ❖ Ionic Cloud and Its Contribution to the Total Potential | 176 |
| ❖ Debye-Huckel Limiting Law of Activity Coefficients and Its Limitations..... | 178 |
| ❖ Ion-Size Effect on Potential..... | 185 |
| ❖ Ion-Size Parameter and the Theoretical Mean - Activity Coefficient in the Case of Ionic Clouds with Finite-Sized Ions..... | 187 |
| ❖ Debye-Huckel-Onsager Treatment for Aqueous Solutions and Its Limitations..... | 190 |
| ❖ Debye-Huckel-Onsager Theory for Non-Aqueous Solutions..... | 195 |
| ❖ The Solvent Effect on the Mobility at Infinite Dilution | 196 |
| ❖ Equivalent Conductivity (Λ) vs Concentration $C^{1/2}$ as a Function of the Solvent | 198 |
| ❖ Effect of Ion Association Upon Conductivity (Debye-Huckel-Bjerrum Equation) | 200 |
| ❖ Problems..... | 209 |
| ❖ Bibliography | 210 |
| CHAPTER 5 | 211 |
| Quantum Mechanics – II | 211 |
| ❖ Schrodinger Wave Equation for a Particle in a Three Dimensional Box | 211 |

| | |
|--|------------|
| ❖ The Concept of Degeneracy Among Energy Levels for a Particle in Three Dimensional Box | 215 |
| ❖ Schrodinger Wave Equation for a Linear Harmonic Oscillator & Its Solution by Polynomial Method | 217 |
| ❖ Zero Point Energy of a Particle Possessing Harmonic Motion and Its Consequence | 229 |
| ❖ Schrodinger Wave Equation for Three Dimensional Rigid Rotator..... | 231 |
| ❖ Energy of Rigid Rotator | 241 |
| ❖ Space Quantization..... | 243 |
| ❖ Schrodinger Wave Equation for Hydrogen Atom: Separation of Variable in Polar Spherical Coordinates and Its Solution | 247 |
| ❖ Principal, Azimuthal and Magnetic Quantum Numbers and the Magnitude of Their Values..... | 268 |
| ❖ Probability Distribution Function..... | 276 |
| ❖ Radial Distribution Function | 278 |
| ❖ Shape of Atomic Orbitals (<i>s</i> , <i>p</i> & <i>d</i>)..... | 281 |
| ❖ Problems..... | 287 |
| ❖ Bibliography | 288 |
| CHAPTER 6 | 289 |
| Thermodynamics – II..... | 289 |
| ❖ Clausius-Clapeyron Equation..... | 289 |
| ❖ Law of Mass Action and Its Thermodynamic Derivation | 293 |
| ❖ Third Law of Thermodynamics (Nernst Heat Theorem, Determination of Absolute Entropy, Unattainability of Absolute Zero) And Its Limitation..... | 296 |
| ❖ Phase Diagram for Two Completely Miscible Components Systems | 304 |
| ❖ Eutectic Systems (Calculation of Eutectic Point)..... | 311 |
| ❖ Systems Forming Solid Compounds A_xB_y with Congruent and Incongruent Melting Points | 321 |
| ❖ Phase Diagram and Thermodynamic Treatment of Solid Solutions..... | 332 |
| ❖ Problems..... | 342 |
| ❖ Bibliography | 343 |
| CHAPTER 7 | 344 |
| Chemical Dynamics – II | 344 |
| ❖ Chain Reactions: Hydrogen-Bromine Reaction, Pyrolysis of Acetaldehyde, Decomposition of Ethane..... | 344 |
| ❖ Photochemical Reactions (Hydrogen-Bromine & Hydrogen-Chlorine Reactions)..... | 352 |
| ❖ General Treatment of Chain Reactions (Ortho-Para Hydrogen Conversion and Hydrogen-Bromine Reactions)..... | 358 |

| | |
|---|------------|
| ❖ Apparent Activation Energy of Chain Reactions | 362 |
| ❖ Chain Length | 364 |
| ❖ Rice-Herzfeld Mechanism of Organic Molecules Decomposition (Acetaldehyde) | 366 |
| ❖ Branching Chain Reactions and Explosions (H ₂ -O ₂ Reaction) | 368 |
| ❖ Kinetics of (One Intermediate) Enzymatic Reaction: Michaelis-Menten Treatment | 371 |
| ❖ Evaluation of Michaelis's Constant for Enzyme-Substrate Binding by Lineweaver-Burk Plot and Eadie-Hofstee Methods | 375 |
| ❖ Competitive and Non-Competitive Inhibition | 378 |
| ❖ Problems | 388 |
| ❖ Bibliography | 389 |
| CHAPTER 8 | 390 |
| Electrochemistry – II: Ion Transport in Solutions | 390 |
| ❖ Ionic Movement Under the Influence of an Electric Field | 390 |
| ❖ Mobility of Ions | 393 |
| ❖ Ionic Drift Velocity and Its Relation with Current Density | 394 |
| ❖ Einstein Relation Between the Absolute Mobility and Diffusion Coefficient | 398 |
| ❖ The Stokes-Einstein Relation | 401 |
| ❖ The Nernst-Einstein Equation | 403 |
| ❖ Walden's Rule | 404 |
| ❖ The Rate-Process Approach to Ionic Migration | 406 |
| ❖ The Rate-Process Equation for Equivalent Conductivity | 410 |
| ❖ Total Driving Force for Ionic Transport: Nernst-Planck Flux Equation | 412 |
| ❖ Ionic Drift and Diffusion Potential | 416 |
| ❖ The Onsager Phenomenological Equations | 418 |
| ❖ The Basic Equation for the Diffusion | 419 |
| ❖ Planck-Henderson Equation for the Diffusion Potential | 422 |
| ❖ Problems | 425 |
| ❖ Bibliography | 426 |
| INDEX | 427 |

Mandeep Dalal

Mandeep Dalal is an Indian research scholar who is primarily working in the field of Science and Philosophy. He received his Ph.D in Chemistry from Maharshi Dayanand University, Rohtak, in 2018. He is also the Founder and Director of "Dalal Institute", an India-based educational organization which is trying to revolutionize the mode of higher education in Chemistry across the globe. He has published more than 40 research papers in various international scientific journals, including mostly from Elsevier (USA), IOP (UK) and Springer (Netherlands).
